

Professional Security for Apple Macintosh Computers

Apple Mac Security in a class of its own.

On the one hand, all Macs have a standard security slot or similar anchor point. On the other hand, Apple Mac computers are so prone to theft that there is usually a need to step up the security.

SecuPlus recognizes this problem and offers a wide range of solutions for the Apple Mac in consultation with some of the bigger insurers.

For circumstances in which theft is less likely to happen we have cable security sets with which to secure the smaller Macs in particular to the workplace quickly and easily.

For the bigger iMacs, Cinema Displays or MacPros the docks or security boxes are recommended. They are both solid solutions, which make theft much more difficult.

If you knew how many theft attempts our Apple Macintosh Security Cables has stopped successfully...
