

PLASMA SONIC SHOCK ALARM

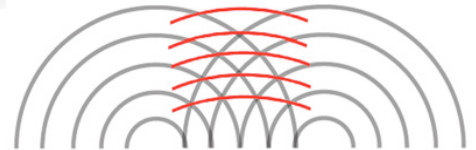

Plasma Shock is an alarm you attach to your Plasma Screen, computer or printer. It triggers if thieves take these things, forcing them to either carry a sounding alarm, or abandon the attempt.

We include ear plugs with each Plasma Sonic Shock Alarm You will need them!

**You can hear them coming.
They cannot hear you coming!**

The Shock Alarm's siren is triggered by severing an electronically monitored tether. No motion trigger, no false alarm. Once tripped, the siren sounds for over two hours. Sonic Shock was built for commercial and educational use. It's reusable It's housings are 1/16" stainless steel. The battery will outlast your equipment.

Dual Sirens Drive Three Waves
Twin sirens don't just generate more noise, they rhythmically combine and produce a third super wave that rips

TECHNICAL SPECIFICATIONS

Proven to Stop Thieves

Micro Alarm - 117 dB

For each thing your thieves try to take, they have to take one of these. It's the world's loudest micro alarm, custom made for us. You don't just hear it, you feel it! The PLASMA SHOCK ALARM has TWO MICRO ALARMS giving double the noxious noise level.

50 Year Battery

That's not a misprint. Our tiny custom analog computer sips so little current it will take 50 years to drain the battery. No remembering to change batteries. No annoying low battery beeps. Batteries do get old, so we suggest you change it - a simple 9 volt alkaline - every 4 or 5 years or if the alarm has gone off for over an hour. But the world won't end if you forget.

Electronic Triggering

Forget false alarms. You rope our 10 foot (3 metre) electronic tether around something heavy, plug it into the Shock Alarm, then arm it with a key. You can bump, lift, or even move equipment within the radius of the tether and you'll never get an alarm. Unplug or cut the trip wire though, and you will! Once started, it doesn't stop until you stop it.

Swappable Locks

We use Ilco removable core locks. You can change a lock in seconds. You can order units keyed alike, differently, even master keyed. You can buy some now, then buy more later keyed the same way.

Stainless Steel

Our housings and parts are forged from granite hard top grade stainless steel. Stainless isn't used so much in public places just because it looks nice. It's extremely hard to dent, drill, and bend.

The World's Strongest Glue

It's expensive, so nobody else uses it. It's the best, so we do. It's methylmethacrylate, used industrially for car bumpers and yacht hulls - things that absolutely positively must never come apart.

Installs in Minutes

Actually it only takes a minute. The other minutes you spend reading a comic book while the glue sets. If you can do that, you can do this. Just glue on the mounting bracket, snap on the alarm, plug in the electronic tether, and you're done.

It'll take you longer to read our instructions.
