The UniGuard IV Projectors Encasements are a universal security solution for organisations which need to use different projectors in the same location.

The UniGuard IV will accommodate projectors of different sizes with left, right or centre lens configurations, and will adjust to allow for the varying ventilation patterns between models and makes of projectors.

All four sides of the UniGuard have sliding doors. All doors can be moved into any position within the side on which they are situated. Any door will fit any side. Two doors are provided for each side, dependent on the make and model of projector used.

It is not always necessary to use the full compliment of supplied doors.

Changing projectors is quick and easy and angle adjustments if needed, achieved in seconds.

The unit is secured by locking the sliding doors into the slide channels, achieved using two locking bars which stop the sliding doors being removed.

The doors are still adjustable even when the unit is fully secured. The locking bars are each secured by a radial tamper proof lock, which is situated internally within the encasement.

Technical Specification

Construction

Constructed from 2 mm sheet steel. 50 mm square bar and 25 mm solid round bar.

Sliding Doors

All four sides have sliding doors, two per side. All doors have in-built ventilation patterns.

Locking Bars

Manufactured from 4 mm steel they are positioned internally and it is impossible to get a cutting tool into a position to achieve severance.

Corner Construction

Left front and Right Rear manufactured from 50 mm square bar with 25 mm solid round bar free

Locks

Two tamper proof radial locks again positioned internally so very difficult to tamper with. Keyed alike within the enclosure, they can be keyed alike or keyed different across a range of units.

Finish

Powder coated to colour of your specification.
